In the Claims:

1. (Currently amended) A method for scenario synchronizing between a primary display and a secondary display of a communication device, comprising:
 - receiving an event associated with a music application ~~user-initiated application~~ at the communication device;
 - displaying ~~information~~ a selected song title associated with the event on the secondary display;
 - initiating a task associated with the music application ~~user-initiated application~~ from the secondary display;
 - accessing the primary display;
 - retrieving additional ~~information~~ song titles associated with the event from the music application ~~user-initiated application~~; and
 - in response to accessing the primary display, automatically displaying on the primary display the initiated task associated with the music application ~~user-initiated application~~ and displaying on the primary display the additional ~~information~~ song titles associated with the initiated task.
2. (Original) The method of Claim 1, wherein the communication device is a clamshell flip-style device.
3. (Original) The method of Claim 2, further comprising opening the communication device such that the primary display is accessible.
4. (Cancelled).
5. (Original) The method of Claim 1, further comprising dismissing the selected song title ~~information~~ associated with the event from the secondary display.
- 6-7 (Canceled)

8. (Currently amended) A system for scenario synchronizing in a communication device, comprising:

a secondary display;

a primary display coupled to the secondary display; and

a media music application that activates upon the occurrence of a user-initiated event at the communication device, wherein:

the media music application provides a first level of information and functionality to the primary display, wherein the first level of information includes a highlighted selected song title and additional song titles of a play list,

the media music application provides a second level of information and functionality to the secondary display, wherein the second level of information includes the selected song title of the play list.

the first level of information and functionality is greater than the second level of information and functionality,

the second level of information and functionality associated with the user-initiated event is retrieved from the media music application and displayed on the secondary display, and

upon accessing the primary display, the first level of information and functionality associated with the user-initiated event is retrieved from the media music application and displayed on the primary display, wherein navigation of the media music application is not required for access to the first level of information and functionality.

9. (Original) The system of Claim 8, wherein the primary display is larger than the secondary display.

10. (Original) The system of Claim 8, wherein the secondary display is located on an outer surface of the communication device.

11. (Original) The system of Claim 8, wherein the communication device is a clamshell flip-style device.

12. (Original) The system of Claim 11, wherein the primary display is accessible when the communication device is opened.

13. (Cancelled)

14. (Original) The system of Claim 8, further comprising a first set of hardware coupled to the secondary display for manipulating content shown on the secondary display.

15. (Original) The system of Claim 8, further comprising a second set of hardware coupled to the primary display for manipulating content shown on the primary display.

16. (Currently amended) A computer-readable medium on which is stored a computer program for scenario synchronizing between a primary display and a secondary display of a communication device, the computer program comprising instructions, which when executed by a computer, perform:

displaying a selected song title ~~an item~~ of a music list on the secondary display, wherein the ~~item~~ selected song title of the music list is navigatable from the secondary display, wherein the ~~item~~ selected song title of the music list is associated with a music application;

accessing the primary display;

automatically retrieving additional ~~items~~ song titles of the music list associated with the music application; and

in response to accessing the primary display, automatically displaying on the primary display the selected song title and the additional items song titles of the music list associated with the music application, wherein the selected song title is highlighted in the music list.

17-18 (Cancelled)
